

Global intelligence. Thinking out loud  
Abstracts for the meeting on September 10 2020  
The energies of global intelligence

1

"The Old World is doomed. The New World is inevitable!". This verdict was passed by the Club of Rome and announced in the 50th anniversary report in 2017. Leading scientists of this club have come to an unambiguous conclusion about the inevitability of a radical change in the development paradigm of our civilization. Rejection of materialism and a simplified understanding of the world, an appeal to the alternative economy, to the "new Enlightenment", a single planetary harmonious civilization, the agenda for future development proposed by the Club of Rome. The paradox is how quickly they forged from transhumanism and globalism into a harmonious civilization. Either they are covering up their intentions, or they are preparing something fundamentally new.

Russia is not yet represented in the world processes of shaping the image of the future.

This is a challenge of the Space Intelligence to the minds of Russia, i.e. all of us.

2

Call to memory - In the ideal world of the Goodness of God, Thought was a Deed, which was produced by the Word, performed by Spirit. What thoughts and words will be in the new cosmic religion, what the new scientific knowledge will be and what kind of Spirit will arise is still unknown. In correspondence with a new idea, with new logos, a structure of beings that brining this knowledge to life will emerge.

#### Some definitions

Intellect - psi phenomenon that unites a large group of people, the cosmic factor of survival, the field form of living cosmophysical substance, the ability to solve problems "in the mind", the reflection in the consciousness of the modern stage of evolution.

"Psi" is in Greek, "spirit" in Russian.

Based on this definition, there can be no artificial intelligence. But we made up with it, as well as with "sovereign democracy", "innovations", "tolerance" or "virtuality". Intelligence is the living energies of the living Cosmos.

Ecology - the study of the interaction of living organisms - humans, animals, plants, other living organisms between themselves and the environment, between the living and inert world. We can say - the ecology of intelligence, i.e. ecology of the unknown.

First medium - this is nature, uncreated, second medium is everything that changed by man, a new artificial world, third medium is intelligence, field forms of life.

The meaning is in the definition: "The essence of any phenomenon, which does not coincide with itself and connects it with a broader context of reality", i.e. the phenomenon of intelligence in the human community, Space and Universe. The meaning of the phenomenon justifies the existence of the phenomenon, since it determines its place in some integrity, introduces a part-whole relationship, makes it necessary as a part of this wholeness.

Tolerance - an immunological state of organism in which it is unable to synthesize antibodies in response to the introduction of a certain antigen while maintaining immune reactivity to other antigens. What is an antigen? An antigen is a substance that the body considers to be foreign or potentially harmful.

Virtuality - a certain state of consciousness in which the subject loses the distinction between the real world and constructed world, i.e. the virtual world. This is a characteristic of the type of consciousness and perception of the subject, artificially created technical and psychological phenomena that create a new quality of perception and experiences.

3

In our century, the biosphere receives a completely new understanding. It is revealed as a planetary phenomenon of a cosmic nature, and a global organism of the biosphere is being formed. The intelligence of humanity on planet Earth is also a natural cosmophysical phenomenon of a universal scale. Intellect has the property of an outstripping this universal reflection of cosmic planetary evolution, i.e. nature does not move spontaneously, but according to a certain plan itself, written by nature, which is reflected in the cosmic intelligence and is realized.

Questions are accumulating: how to be, where and what forms of energy will civilizations be organized, interact with each other, and what kind of process is this?

4

The meanings of human life in the 21st century on the Earth are in the recognition that the world of the Universe is not intended for us, but we are for it, we are part of it, nothing more. Deviation from these meanings leads to an irreversible consequences, regardless of geography, politics or economics.

One way is intellect and survival, another is intellect and self-destruction, the third is intellect and creative development in a living Space. New creation of meanings. Meanings are created by living Cosmos and Intellect. People, humanity, will either be able to understand and accept them, or not.

The survival of humanity depends on the creation of planetary programs, a change in scientific paradigms, the inclusion of cosmoplanetary intellectual processes. We are entering a new world of naturophilosophy, where the ideal and material worlds are unite, the materialized ideal comes out on top. Let's emphasize - materialized ideal.

5

If transhumanists evoke a "golden dream" to humanity - life up to 150 years without diseases, all the wisdom that scientific progress will give, Russian scientists KOSMISTS fundamentally differently see each person and humanity without separating him from the Living Space of the Cosmos.

V.P. Kaznacheev discovered (USSR discovery No.122) a new form of living matter of field organization, the energy of the third habitat of all living things.

What role does it play, this field form? In experiments, this field form, being broadcast into a living cell, changes its genome. The genetic program can be changed. We have to conclude that the field form is evolutionarily more powerful and most likely primary than the macromolecular form of life on Earth.

Such a discovery can be compared to the change that occurred when the Earth ceased to be the universe created by God, but quite the opposite revolves around the Sun. In Egypt, Slavic paganism, the Sun was God. In the 20th century, it was scientifically proven that matter is secondary.

6

Choosing the path of limiting thought by the Technologos, i.e. technique and technology, we immediately understand the limitations of our knowledge. The current ignorance is no longer ignorance, it is a well-reasoned, well-defined innocence. Innocence provokes our thought, our imagination. There is always a mystery behind deep innocence. The 21st century has put humanity in its very complex interlacing of geopolitical contradictions in front of this greatest secret of innocence. It is innocence is hidden in the understanding of the essence of living matter, intelligence and the nature of intelligence in the world of energies of the infinite Cosmos.

The basis of life is made up of completely immaterial substances, ether, energies invisible and not felt in ordinary life. After all, people also do not feel gravity, as well as radiation, not to mention electromagnetic fields.

The paradox is completely incomprehensible, but it has been proven - future can arise in the minds of people and be understood. By the way, past can arise also.

The ability to foresee events is possessed by almost all the living population of the planet, plants, animals, all the rest. To anticipate reality is a survival factor, a living intellect.

The fact of the transfer of images has been proven, it is up to real technologies. It means, that It is possible to control the large communities of people. The whole Earth is covered by antennas and repeaters, there are a lot of satellites on stationary orbits. For example, to record in field forms a lethargic sleep of a person or something else from the psyche and broadcast to the desired territories or groups of people.

7

In essence, the planet is being reconstructed. At the same time, the ordered component grows, but natural resources disappear. Natural ones disappear, but new, unusual ones appear - information, thoughts, knowledge, large volumes of databases, objects of intellectual property, laws and norms of life, knowledge about what they not only did not know before, but could not even think about. To new resources should be added - gasoline, metal, plastic, synthetic products and much more.

Plus, such a resource as living people, who have increased their population sevenfold during the 20th century.

The latest news from the series of the obvious incredible The USA has a real need not only to Explore Outer space, but also to solve the problem of its absolute mastery. There are already real plans for the placement of weapons in outer space.

Evolution, deformation of changing process of living matter becomes faster, this is negative and very unstable progressiveness. The knowledge that is acquired in the laboratories of institutes, scientific complexes, expeditions, fall behind the changes in the living matter of our planet. Academician V.P. Kaznacheev defined this as a black intellectual hole.

8

Our intellect on planet Earth is only a small part, a fragment of the cosmophysical energies of the intellect, which, self-reflected by its evolution, builds its world in Cosmic space in a variety of options, which can be antagonistic or synchronous, consistently supporting each other.

We live in a cosmic intellectual space, the nature of which consists of very complex heterogeneous ethereal and possible little-known fields that interact with particles and redistribute energy flows.

As for the forecasts, in the near future the discovery of new energy sources is coming, this is etheric energy, the energy of liberating the ionosphere, in water structures, and in complex nuclear structures that exist on the planet.

9

The world is on the edge of a transition to the fundamental problem of the nature of the living matter of the Cosmos, about the entry of mankind of the planet Earth into cosmic civilizations, about the allocation of our intellect as a new cosmic form of living matter, which is connected with the usual biological mass of our cells, but due to the field fractal and other connections it is already entering another cosmoplanetary sphere.

By the end of the past millennium on the Earth, the relations between the creative destructive tendencies of human activity have sharpened to the limit. More than ever, in essence, all life support resources of the biosphere are mobilized to protect life processes from technical progress, that has hidden goal is fighting

against evolutionary potential of the biosphere and the laws of the geological and geophysical environment.

Is humanity able to swing such a powerful, well-balanced and at the same time sufficiently mobile and easily adaptable system like our climate? It is possible to consider the probability of such strong impact after which the Earth will simply "sweep away" humanity from its surface and begin a new, undoubtedly successful one "game" with continents and life forms.

10

The human activity, in essence, has challenged the solar-cosmic laws and evolutionary possibilities. This transformation is the process of self-destruction of human civilization of the image named "the conquest of nature", i.e. to force the Highest to serve to the lowest, is well illustrated by the growing global socio-catastrophes. These disasters are usually ahead of natural ones.

As always, New times came completely unexpectedly, and, it would seem, suddenly, at the turn of the 20th century of third millennium, everything was studied in advance by leading scientists from different countries, the conclusion is categorical, we will perish with our stupid machine civilization. Technos displaces, replaces Divine idea of the Creator, of Divine Logos. The miraculousness disappears.

There is no longer machines serving man, but man himself, by the fact of his existence, serves with his labor, by his body and mind a huge, planetary intellectual and financial machine, consumes their meanings.

11

Imperceptibly for humanity, it turned out that all life on Earth lives in conditions of ever-increasing energy intensity, by orders of magnitude, of electromagnetic waves, starting with the Schumann resonance frequencies of 10.1-41.1 Hz to microwave frequencies. Thus, the technosphere has carried out a change in the electromagnetic power supply of the living biosphere by placing the entire area of the hurricane build-up of electromagnetic energy with gigantic fluctuations of the field strength.

Intelligence, energies of the Cosmos are present on the Earth constantly and we are its private manifestation, it is independent of human civilization, on the contrary, our civilization depends on this intelligence.

It may seem that this is science fiction, "troubles", but the best directors of the world speak, write and make movies about it. Look at the world bestseller "Avatar", read the books by I.A.Efremov and Dan Brown are being made. Especially "The Lost Symbol" about the problems of noetics. This is about consciousness, about field forms, about what the world of the future can be like.

12

Drama and tragedy of nowadays phase of civilization are associated with large-scale and all-round destruction of biospheric processes on Earth, including humans. The tendency of acceleration of the material enrichment of mankind with the destructive power of Technologos, as a new global factor for the geological history, becomes obvious.

In just a few decades, the resource extraction jumped several times, and the devastating stage of the Earth's shells, especially the lithosphere and gas-plasma environment, began. Inert matter possesses the property of historical evolutionary memory, which is active, diverse and is a natural cosmophysical phenomenon of the Universe. It means if we interfere with the inert substance of the planet, then by changing it, if we disturb its memory, we can, without realizing it, change our intellectual, human memory and the world order.

In essence, the terrestrial civilization will kill living matter due to the technocratic movement and will come into conflict with the Cosmic forms of intelligence. Not understanding the causes of life, humanity lives in the "world of effects" and fights against life itself.

\*

Why are we telling all this?

Even the ancients argued: Knowledge is higher than science, and faith is higher than knowledge.

If we feel the energies of global intelligence and know the assemblage point, it is our duty to create an image of a future civilization on planet Earth and offer this image to the world scientific community for discussion.

Can we imagine that in the future, given the current trends:

humanity will not have enough live energies of global intelligence, field forms of life,  
it is this factor that will lead to a radical transformation of the way of life on planet Earth, will allow  
to enter the living space of the Cosmos.

The task is difficult, but it is necessary to awaken imagination and faith.

In preparing this message, we were accompanied by the thoughts of Kaznacheev, Akulov, Dmitriev, Mingazov, Ivashov, Semyonov, Timerbulatov, set forth in their articles, books, speeches of participants in the Ziegel Readings, in the works of the "Ecology of the Unknown" Association, Russian scientists of the Intelligence Survival Science Foundation, analytical school.

On the website of the Association "Ecology of the Unknown" there is a video lecture by academician V.P. Kaznacheev, the article "Intelligence changes meanings at the crossroads of civilizations."

MELNIKOVA Elena Nikolaevna, Doctor of Economics, full member of the International Academy of Sciences of Higher Education (IAS HS), International Academy for Future Studies (MAIB), President of the Science Foundation "Intelligence and Survival". Academician of the Academy of Geopolitical Problems, Leading Scientific Expert of the Association "Ecology of the Unknown"
